

$u_1 = 10^{-3}\,\mathrm{ReLU}(L - c + 0.25)$

coverage goal not above the mandible limit

$u_2 = 10^{-3}\,\mathrm{ReLU}(0.35 - f), \quad f = m - 0.05\,V$

little mandible forced into the PTV

$g = \mathrm{ReLU}\big(10 - 2.5 \times 10^4\,(u_1 + u_2) + \cdots\big)$

fires only when neither holds: rule B

$\mathrm{score} \leftarrow \mathrm{score} + 200\,g$

a large vote to escalate

Doses in Gy, volumes in cc. The edit changed 22 of the 433 parameters; only the new connections are drawn.
